# Numbers vs. Graphs

«In [mathematics](#), and more specifically in [graph theory](#), a **graph** is a structure amounting to a set of objects in which some pairs of the objects are in some sense "related". The objects correspond to mathematical abstractions called [vertices](#) and each of the related pairs of vertices is called an [edge](#).

Typically, a graph is depicted in [diagrammatic form](#) as a set of dots for the vertices, joined by lines or curves for the edges» (Wikipedia).

A [drawing](#) of a [labeled graph](#) on 6 vertices and 7 edges.

# Numbers vs. Graphs

... the source code of Wikipedia using graphs

# Examples of numbers

**Sophie Germain** (1776-1831): important contributions in number theory and elasticity theory. As a woman, she could not attend the Ecole Polytechnique, she obtained the lecture notes, but submitted comments under the name of a former student Monsieur Antoine-August Le Blanc. As she later explained to Gauss, she was "*fearing the ridicule attached to a female scientist*".

# Examples of numbers

**Emmy Noether** (1882-1935): important contributions in algebra and mathematical physics. After completing her dissertation in 1907, she taught in Erlangen without pay for seven years. In 1915, she was invited by [David Hilbert](#) at the University of Göttingen, but she had to lecture four years under Hilbert's name because she was a woman.

## Examples of numbers

**Sophia Kovalevskaya** (1850-1891): important contributions in analysis and mathematical physics. Women were not allowed to attend universities in Russia, so to move abroad she contracted a "fictitious marriage" with Vladimir Kovalevskij and she went at the University of Heidelberg. First woman in Europe to become full professor (Stockholm University).

# Examples of numbers

*“I looked quite stern in the photograph because I think people will not trust me if I smile”, said Sophia*

(A. Munro, “Too Much Happiness”, 2009)

# The necessity of becoming graphs

Nowadays:

- we can have the lecture notes
- we can attend the university classes
- we can teach and become full professor,

but... it is usually very low the number of

- full professors in Mathematics
- women in boards of societies and academies
- women in editorial boards
- women in conference committees
- women awarded of prizes
- etc.

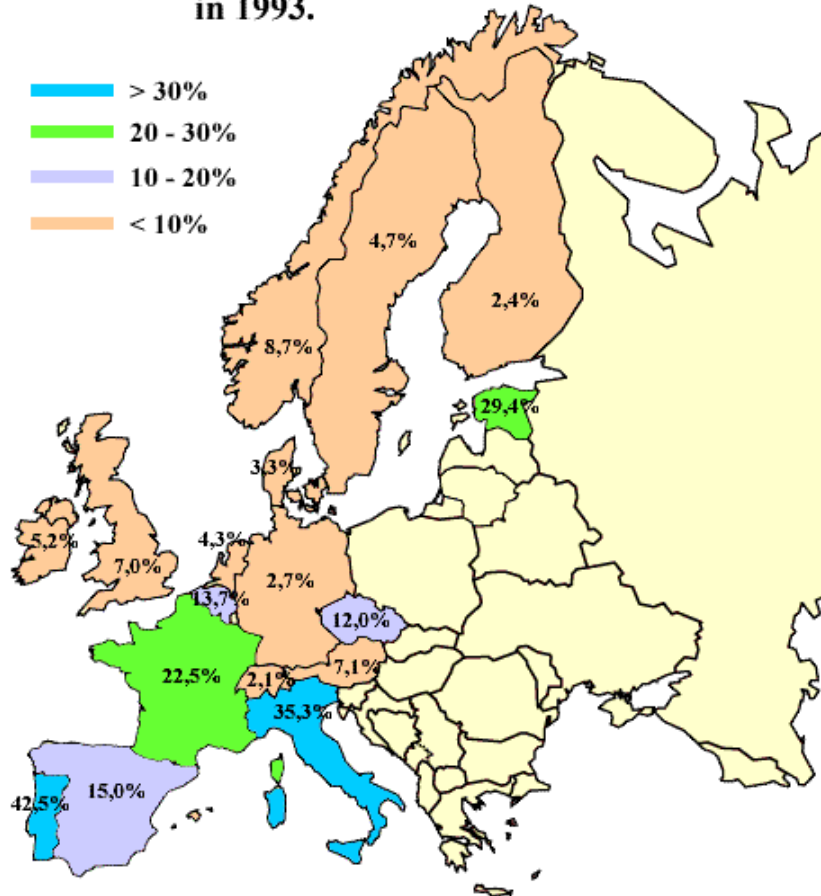

# Criticalities

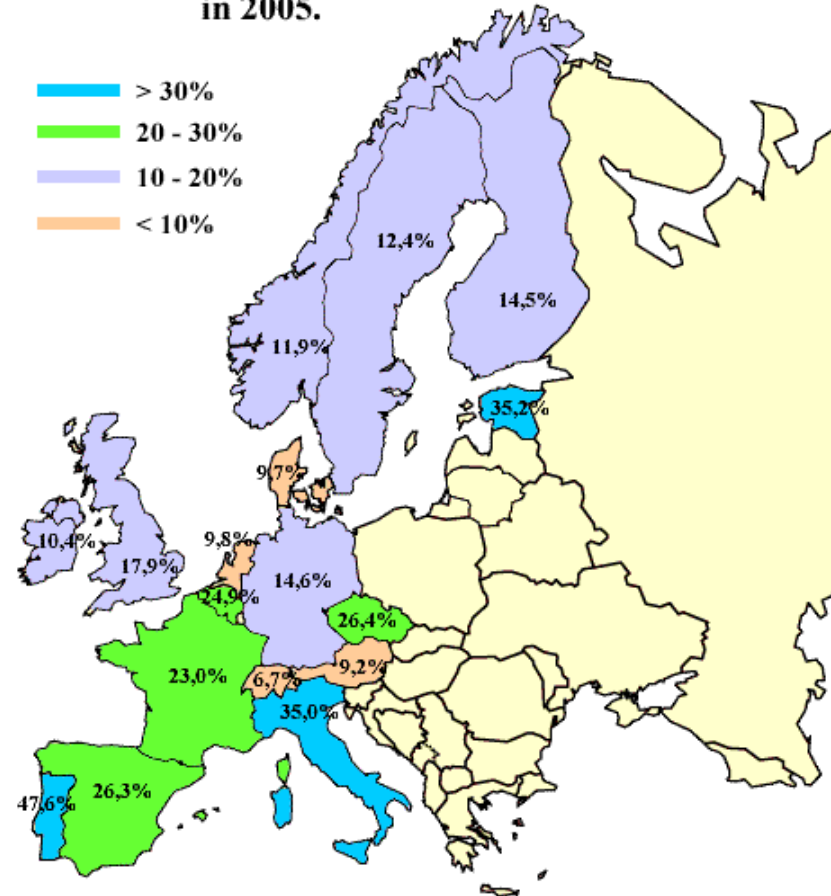

# Some data

Percentage of women mathematicians  
in 1993.

Percentage of women mathematicians  
in 2005.

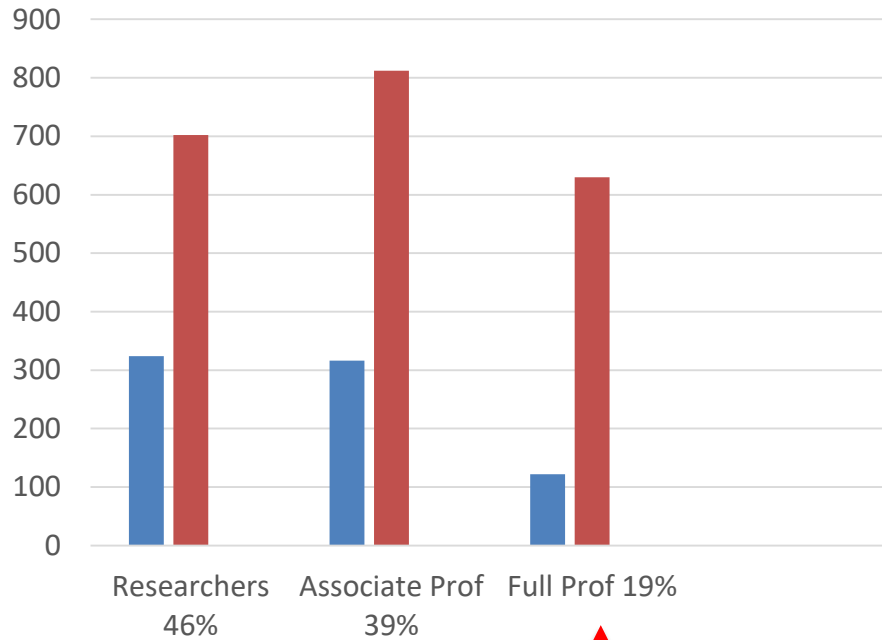

- Geographical distribution of women mathematicians in Europe (1993 vs. 2005) [EWM-European Community]

# Some data

## Women in Mathematics in Italy 2018

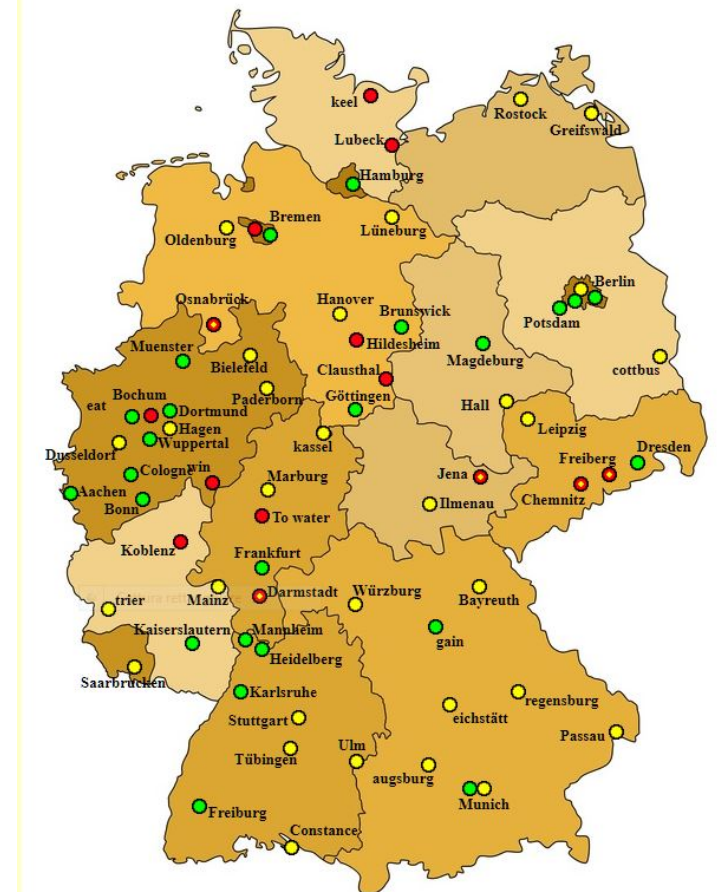

**19 %**

## Women Mathematics Profs in Germany 2018

Last change: 22.4.2018.

Contact: [Prof. Dr. med. Christine Bessenrodt](mailto:bessen@math.uni-hannover.de), bessen@math.uni-hannover.de

- no professor of mathematics at the department
- no professor appointed permanently, but 1-2 junior or apl. Professorinnen
- 1-2 at the FB employed female professors, at least one permanently appointed
- at least 3 female professors, at least 2 permanently appointed

**TOTAL** 19/118 women

# Rearrange the Graph

# Improve via Networks

## CROSS-DISCIPLINARY NETWORKS

- European Women in Mathematics → 573 members
- Committee for Women in Mathematics – IMU
- Association for Women in Mathematics

For example, **EWM** goals:

- *encouraging women to study mathematics*
- *supporting women in their careers*
- *providing a meeting place for like-minded people*
- *promoting scientific communication*
- *cooperating with groups/organizations with similar goals*
- *giving prominence and visibility to women mathematicians*
- *spreading their vision of mathematics and science.*

# Improve via Networks

## CWM/IMU committee for issues related to women in mathematics worldwide. Goals:

- To **propose, encourage** and **facilitate** activities of the IMU or other bodies which would tend to **increase the visibility** of women in mathematics and lead to an increase in their representation in the community.
- To **promote** international contacts between national and regional organisations for women in mathematics, in particular facilitating the **building of networks** at the regional or continental level.
- To **provide** a website which is a repository of information for and about women in mathematics worldwide and to enable efficient communication among the international community of women mathematicians.

# CWM/IMU-initiatives

CWM offers **grants** and sponsorship for various types of activities.

CWM organises a satellite **meeting** of ICM 2018: World Meeting for Women in Mathematics

# CWM/IMU-initiatives

**The Gender Gap Project** in Mathematical and Natural Sciences, funded by the International Council for Science

Establish and foster **networks** of women mathematicians especially in Asia, Latin America and Africa

# Improve via Topical Networks

## TOPICAL NETWORKS

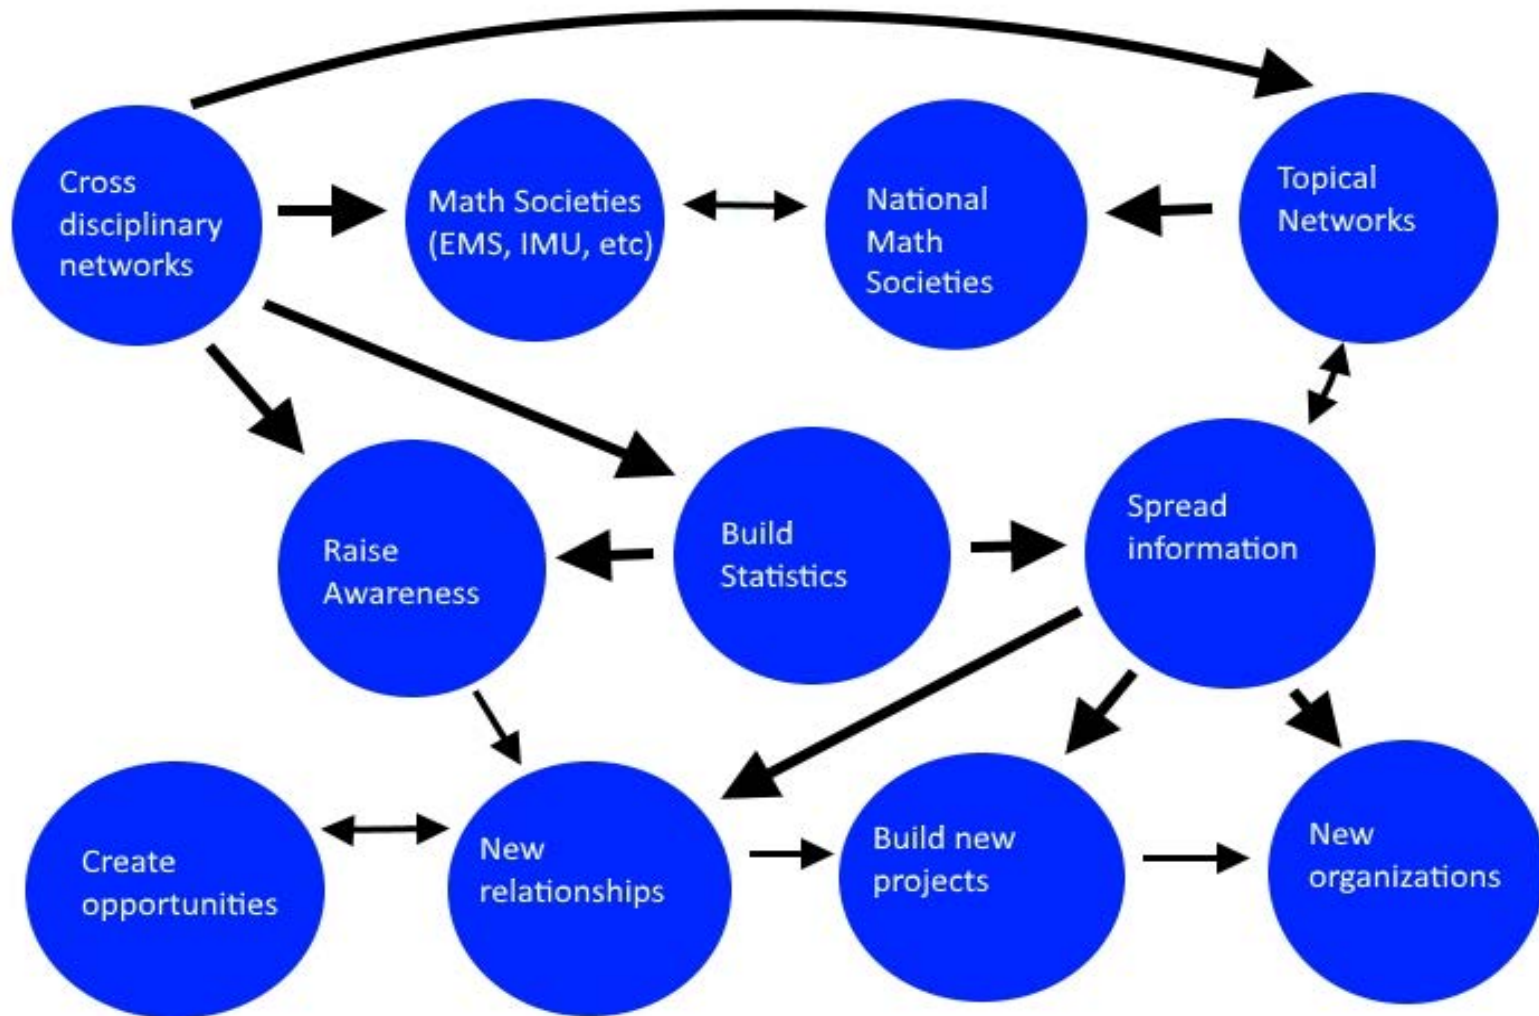

- Women in optimization
- Women in Number Theory
- Women in Probability
- Women in Topology
- Women in Computational Topology
- Women in Sage

# Aftermath of Networking

## SUCCESSFUL RESULTS

- Regular meetings (e.g., EWM GA)
- Workshops (e.g., Women in optimization since 2015)
- Schools (especially for young people)
- Dedicated conferences
- Meetings in countries
- Articles and special issues
- Official committees (e.g., WiM-EMS)
- List of CWM-IMU Ambassadors (120 from all-over the world)
- Projects
- Prizes

# A complex graph: networking

«When a woman, because of her sex, our customs and prejudices, encounters infinitely more obstacles than men in familiarising herself with knotty problems, yet overcomes these fetters and penetrates that which is most hidden, she doubtless has the most noble courage, extraordinary talent, and superior genius»

*Carl Friedrich Gauss (1777 - 1855)*
